The top stainless steel ring gives it an even more distinctive appearance.  
 It is ideal to be placed on both open spaces and narrow streets of historic centres in order to control, limit or prevent traffic et guarantee the security of pedestrians.  
 Bollard made of iron treated with Ferrus, a protective process that guarantees high resistance to corrosion. This treatment consists of three layers applied after shot cleaning all impurities: zinc plated, epoxy primer coating and wrought iron black polyester powder coating. Stainless steel ring.  
 Recommended anchoring: embedded base and threaded rods with concrete.
