Nerja is a fishing and agricultural city which belongs to the province of Malaga. It is located in the eastern end of the Costa del Sol, at the border with the province of Granada, and bathed by the Mediterranean Sea.

The City Council of Nerja has installed new bins in the pedestrian area of the old town. More precisely, they have installed the Gea model, made of recycled polymer recovered from urban selective collection, thus guaranteeing the circularity of the material from its origin to the end of its useful life. Attractive design, maximum functionality, resistance to UV rays, water and bad weather conditions.
