

Inclusive design fountain made of concrete. Combines the robustness of an ideal material for an element that is in contact with water, with the lightness of an elegant design, capable of integrating into any unique environment. Easy installation as the fountain is equipped with the necessary connections for both the entry of water and its drainage. Does not require visible drain grates, which are often a source of problems related to splashing, oxidation, maintenance, water accumulation, bad odors, etc. It has been designed respecting accessibility standards so that the fountain can be used by wheelchair users.
