

Compact phenolic board - HPL

Outdoor high pressure laminated sheets are used in the Mariscal range of Benito play equipment. HPL is a plastic laminate that has two decorative sides and a compact body. This special laminate is composed of layers of cellulose impregnated with thermosetting resins that are pressed and fused together to form a single body using high heat and pressure. The result of this industrial process is a high performance panel in physical and mechanical terms, with a visually appealing appearance. Illustrations are directly printed on the material. Designed and manufactured under the standards: UNE-1176:2009, UNE-EN 438-6:2005.

Advantages:

- UV rays protection
- Fire resistant
- Easy maintenance

- FSC certification

Applications:

- Protective panels
- Decorative elements

Thickness: 12mm

Edge detailing: R6mm
